Project Title

MODIFICATION IN BICYCLE WITH 4 WHEELS AND FLYWHEEL

Abstract:

According to new generation, the fuel sources are limited and they will finish after few decade. This energy sources are need to save. So this bicycle most useful for save the energy resources .Also the major problem in environment is pollution. the bicycle not produced any type of pollution .the bicycle also include flywheel mechanism so it reduce human effort during the running condition of bicycle. This bicycle are four wheel types and four wheel pedal mechanism so this bicycle also us for a long drive travelling .flywheel function is most important parameter in the transportation vehicle . This type bicycle also includes most important parameter to taking four drive human efforts. So bicycle driving safe and comfortable.
