Project Title

**TO STUDY ABOUT BULK MATERIAL HANDLING AND TO FIND
ALTERNATING SOLUTION FOR EXISTING PROBLEM**

Abstract:

In our IDP project we have visited one industry which is cleaning factory of cummin seeds. There we saw a huge machinery inside the factory. We have observed some days to find a problem in their system. After a certain period we have got one problem of belt failure in elevator.

So we have selected this topic for our IDP project To find alternative solution for existing problem.

Cableflow conveyors are designed for gentle handling and installations requiring conveying in multiple planes. They can transfer fragile bulk products from single or multiple in-feed points to single or multiple discharge points over long distances with little or no damage.
