Project Title

DEVELOPMENT OF MULTIPURPOSE TABLE SAW MACHINE

Abstract:

The aim of the multipurpose table saw machine is useful to doing multiple operation on a single table. This machine is used to the doing different operation on the wood, aluminium sheet etc. It is easy to be carry and move any time and any place. It reduce human effort and also required less skill to operate this machine. Our objectives is to increase accuracy at low prize without affecting the wood cutting and shaping and also make slotting. In this machine the three machine tool joined on a different plate for manufacturing. Three machine plates are one by one fitted on the table which type operation are needed. The fully safety purpose are provided to before the starting the operation. The machines are working on high R.P.M.
